17. SEMINAR JOSIPA ROGLIĆA

Darovitost i daroviti učenici
u nastavi Geografije

5. travnja 2024.

GLOBE razvojni centar

Zrinka Klarin, prof. geografije, GLOBE trener
Tamara Valčić, mag. ing. brodogradnje

Javni poziv

- sufinanciranje projekata rada s darovitim učenicima
- osnovne i srednje škole u školskoj godini 2023. / 2024.

Cilj je poticanje aktivnog učenja te razvoj viših razina kognitivnih procesa, mašte, kreativnosti...

- *Koreacijsko – integracijski pristup*
- *Produbljivanje sadržaja ovisno o interesima učenika*
- *Osmišljavanje i provedbu složenijih aktivnosti*
- *Osiguravanje e-učenja*
- *Suradnja s znanstvenim institucijama i centrima...*

Voditeljice projekta

Tamara Valčić

mag. ing. brodogradnje,
učiteljici tehničke kulture,
učitelj savjetnik

„Razvojni centar GLOBE“

Zrinka Klarin

prof. geografije i
sociologije
učiteljica geografije,
GLOBE trener,
učitelj savjetnik

PROVEDBA PROJEKTA RAZVOJNOG CENTRA GLOBE

2023./2024.

Dokument
aktivnosti
projekta

„Razvojni centar
GLOBE“

Cilj projekta

Potaknuti darovite učenike da se educiraju o dizajniranju i dokumentiranju te izradi tehničke tvorevine.

Povećanje svijesti učenika o klimi, važnosti očuvanja okoliša i klimatskim promjenama te ulogama koje svaki pojedinac može imati u tom procesu.

Vrijeme realizacije projekta
siječanj 2024. – kolovoz 2024.

Broj učenika
15

**Cilj
projekta**

Uvodna radionica

„Misli pametno, živi zeleno“

Radionica Mladi tehničari 1

„Dizajniranje i dokumentiranje razvojnog centra“

Radionica Mladi tehničari 2

„Izrada makete GLOBE razvojnog centra“

Radionica Mladi tehničari 3

„Tehnika i kvaliteta života“

Radionica GLOBE 1

„Protokoli u GLOBE programu“

Radionica GLOBE 2

„Opažanja i mjerjenja u okolišu“

Radionica GLOBE 3

„GLOBE program kroz razvojni centar“

Radionice

Projektom se želi potaknuti interes učenika za prirodne znanosti, samostalno istraživanje, osmišljavanje i provođenje projekata iz područja prirodoslovija.

As of 2021: Please note that the email address for the GLOBE Community Support team has changed, but this change has not been reflected in the eTraining slides. For questions regarding eTraining module content, email globehelp@ucar.edu.

INTRODUCTION TO BIOSPHERE

This module provides an introduction to the Biosphere investigation. You will learn how to conduct GLOBE's biosphere protocols so that the data you collect is of appropriate precision and accuracy. You will learn about the MUC classification system used to classify land cover at our study site, and get an overview of the biometry and phenology field procedures. You will also review the steps you will take to upload your observations to the GLOBE database and visualize data using the GLOBE Visualization system.

Biosphere - Carbon

Do GLOBE GLOBE Data Community News and Events

Carbon Cycle Introduction

In the GLOBE Carbon Cycle Introductory module you will learn why carbon is an important element in ecosystems, how it is stored and transferred in the Earth system, and how increases in atmospheric carbon dioxide impact climate. It also highlights four Learning Activities that introduce systems thinking and the global carbon cycle. After completing major pools and fluxes of the carbon cycle at a global scale, you will be able to determine which vegetation measurements to assess carbon storage and plant growth, and understand resources available to help you analyze and interpret your data.

[Assessment Test](#)

Standard Site Carbon Cycle Protocols

Learn how to set up a Standard Site Carbon Cycle Site to measure the GLOBE Carbon Cycle Protocols. A Standard Site is contiguous vegetation (i.e. forest, grassland, shrubland, school yard, park, etc.) please complete the NON-STANDARD Carbon Cycle Protocols. After completing the Learning Activities and research questions that you can use to evaluate the GLOBE Carbon Cycle Protocols, the selection of a Standard GLOBE Carbon Cycle Site, the introduction of the Standard Tree, Shrub/Sapling, and Small Plant protocols, and the completion of the Standard Site Carbon Cycle Protocols, you will be able to determine which vegetation measurements to assess carbon storage and plant growth, and understand resources available to help you analyze and interpret your data.

[Download Module](#)

[Assessment Test](#)

Non-Standard Site Carbon Cycle Protocols

Learn how to set up a NON-STANDARD Carbon Cycle Site to measure the GLOBE Carbon Cycle Protocols. A Non-Standard Site is a patch of vegetation (i.e. 2.25m² or 1x15m) of vegetation with some human influence (e.g. roads, paths, buildings, etc.). Please complete the GLOBE Carbon Cycle Protocols. This module reviews learning activities that you can use to evaluate the GLOBE Carbon Cycle Protocols, the selection of a Non-Standard Site, and provides a step-by-step introduction of the Non-Standard Site Carbon Cycle Protocols. After completing this module, you will be able to perform field measurements to assess carbon storage and plant growth, upload data to the GLOBE database, and understand resources available to help you analyze and interpret your data.

Edukacija GLOBE

Investigating CO₂ Levels at Your Location

Overview

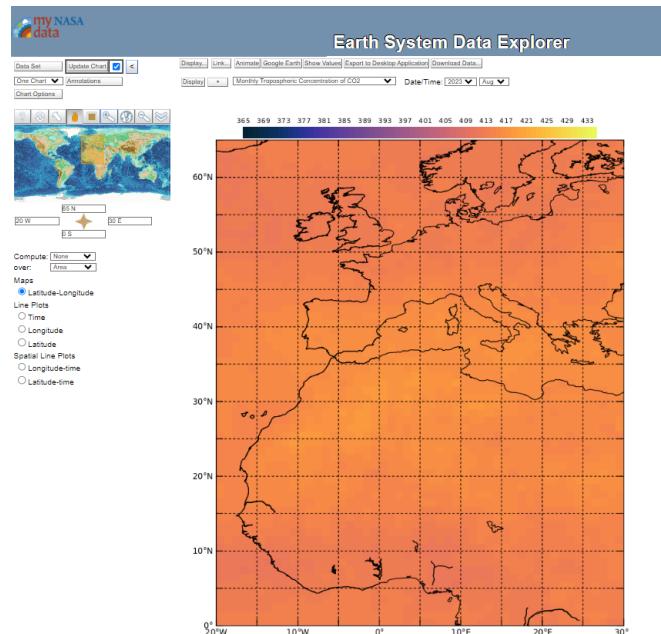

Students will explore existing CO₂ levels at their given location or city. By using Earth System Data Explorer, the teacher will create an animation and line graph of CO₂ levels at their location. Students will analyze these data resources to eventually write a C-E-R response.

Procedure

The screenshot shows the homepage of the my NASA data website. At the top, there's a navigation bar with links for Atmosphere, Biosphere, Cryosphere, Geosphere, Hydrosphere, Earth as a System, Visualize Data (which is highlighted with a red circle), Resources, and About Us. Below the navigation is a search bar. The main content area features a large, colorful image of Earth showing atmospheric layers and environmental phenomena like clouds and landmasses. To the left of the image, there's a sidebar with sections for "New Resource Topics" and "Each topic contains the following resources:". The "New Resource Topics" section lists items such as Atmosphere - Urban Heat Island, Biosphere - Global Phytoplankton Distribution, Cryosphere - Changes Abbedo Values of the Cryosphere, Geosphere - Volcanic Eruptions, Hydrosphere - Ocean Circulation, and Earth As a System - Scale, Quantity, and Proportion. The "Resources" section lists Mini Lessons, Lesson Plans and Story Maps, and Data Visualizations. At the bottom left, there's a link to "Click here to schedule time with us." and two buttons: "Access the MND" and "Data Visualization".

Biosphere - Carbon

Edukacija GLOBE – CO₂

Tri radionice u sklopu projekta:
“Održivim poslovanjem do bolje klime”

1. Izračun emisija CO₂
2. Prilagodba klimatskim promjenama
3. Osnove energetike u svjetlu trenutnih tržišnih zbivanja

Kako možemo smanjiti svoj ugljični otisak?

Smanjivanjem svog ugljičnog otiska, smanjujemo svoj utjecaj na klimu. Proizvodnja svake nove stvari uzrokuje emisije stakleničkih plinova. Možemo pametno odlučivati o nabavi novih stvari. Prije nego što neku stvar bacimo u smeće, vrijedi razmisiliti: ako je pokvarena - možemo li je popraviti; ako nam je dosadila - znamo li nekoga kome bi bila korisna; ako je izgubila prvočinu svrhu - možemo li je koristiti za nešto drugo? Uz to, većina stvari ne mora završiti kao "običan" otpad - valja ih odložiti u prikladni reciklažni spremnik ili odnijeti na reciklažno dvorište.

Što je ugljični otisak?

Ugljični otisak* počinje kadačko svakog od nas utječe na klimatske promjene. On predstavlja kolitmu ekvivalentne ugljika diočida emisiranog od strane organizacije, događaja, proizvoda ili dejstva. Ako se radi o ugljičnom otisku pojedinca, emisije koje nastaju potrošnjem energije (npr. radom na računalima, vožnjom automobilom), smatraju se straznim emisijama tog pojedinca, jer on ili ona nad njima ima kontrolu. Sekundarne (neizrazite) emisije su one koje su nastale korištenjem dobara i usluga. To su na primjer emisije iz proizvodnje hrane. I na njih čovjek može utjecati, primjerice udejstvom lokalne i sezonske hrane te izbalansiranim prehranom s ne prevećkom kalorijenom mese.

*Conserve Energy Future <https://www.conserve-energy-future.com/carbon-footprint.php>
Footprint Calculator <http://footprint.wwf.org.uk/>

U neizrazite emisije ubrajuju se i emisije uzrokovane proizvodima koji su proizvedeni drugdje, ali ih koristi pojedinac, čiji ugljični otisak rabi računa. Brojčano kupujem u Kini, a korist u Hrvatskoj, deponisu ugljični otisak hrvatskog građana. Ugljični otisak računa se u tonama CO₂ ekvivalenta (CO₂e). Kupuj je u univerzalnoj mjerenoj jedinici za emisije stakleničkih plinova koja odražava njihov različit potencijal globalnog zatopljenja.*
